Morning star until its west quadrature, March 30, 1, when it becomes a night star. It reaches opposition June 28, 3, and will then be visible the entire night. September 26, 11 it is in east quadrature, and thereafter remainB an evening star till the close of the year. Motion direct until stationary, April 18, 15; whereupon retrograde until again stationary, September 6, 23; whereafter direct during the remainder of the year. The planet appears (in a good telescope) surrounded by a ring, which appears oval. During the present year the shorter axis of the oval exceeds the diameter of the planet s disk by about one second. The planet and ring appear smallest in January, greatest in June, thereafter diminish again till the close of the year, as shown by the following table giving the number of seconds subtended by diameter...
